Keep oil in its place

Oil Wipers

Emergency turnaround service available

CECO Resilon-T®

High Performance Polymers

- Bronze
- Cast iron
- Thermoplastic

Please consult our materials selection guide for more information

Variety of styles

- High Volume Oil Scraper (HVOS)
- Radial cut
- Tangent cut
- Single acting and double acting

Availability

- The CECO team responds quickly to emergency orders

Preserve critical compressor wear parts!

Keep oil in its place with CECO High Volume Oil Scrapers (HVOS). Our oil wiper rings prevent oil migration past the wiper gland into the pressure packing area and cylinder. Leakage can cause serious problems such as gas contamination and may lead to premature failure of critical compressor wear parts.

To further retain the oil, wiper rings may be paired with one or more sealing rings. CECO sealing rings work in conjunction with oil wipers to prevent gases from entering the crankcase.
