Precombustion Chambers

For natural gas-fired integral gas compressor engines

Fully programmable technology

Features & Benefits

Precombustion Chambers

- Easily installed, does not require head modification
- Enhanced mixing turbulence in primary combustion chamber
- High temperature stainless steel construction
- Reliable ignition for engines with poor air/fuel mixing characteristics
- Increased fuel efficiency
- Reduced exhaust emissions
- Reduced spark plug erosion
- Optimization of emissions vs. efficiency over entire operating envelope
- Consistent combustion cycles

Try the CECO low cost, easy-to-use design!

CECO Precombustion Chambers provide a high energy ignition source for lean air/fuel mixtures. The CECO design offers a simple, low cost alternative to more complicated designs.

No head modifications required!

Delivering superior products and services to the gas transmission, gas processing & petrochemical industries since 1964.
